### PART 1 – FEBRUARY 1974

|                                                                                                                                                                                                                              | PAGE |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| Light microscopic and histochemical observations on the development of the palate in the Golden Syrian hamster. By RAVINDRA M. SHAH and A. P. CHAUDHRY . . . . .                                                             | 1    |
| Histogenesis of the anterior limb of the anterior commissure of the mouse brain. I. A quantitative study of changes in the glial population with age. By R. R. STURROCK . . . . .                                            | 17   |
| Histogenesis of the anterior limb of the anterior commissure of the mouse brain. II. A quantitative study of pre- and postnatal mitosis. By R. R. STURROCK . . . . .                                                         | 27   |
| Histogenesis of the anterior limb of the anterior commissure of the mouse brain. III. An electron microscopic study of gliogenesis. By R. R. STURROCK . . . . .                                                              | 37   |
| The palmar aponeurosis and the central spaces of the hand. By F. BOJSEN-MØLLER and L. SCHMIDT . . . . .                                                                                                                      | 55   |
| An ultrastructural comparison of the mononuclear leucocytes and thrombocytes in six species of domestic bird. By M. H. MAXWELL . . . . .                                                                                     | 69   |
| Fate of auricular transplants and repair of auricular gaps in the grivet monkey ( <i>Cercopithecus aethiops aethiops</i> ). By A. M. LUTFI . . . . .                                                                         | 81   |
| Topological relations between the dendrites of olfactory sensory cells and sustentacular cells in different vertebrates. An ultrastructural study. By W. BREIPOHL, H. J. LAUGWITZ and N. BORNFELD . . . . .                  | 89   |
| The pharyngeal hypophysis in some laboratory animals. By PHILOMENA McGRATH . . . . .                                                                                                                                         | 95   |
| Ultrastructure and histochemistry of the submandibular gland of the European hedgehog, <i>Erinaceus europaeus</i> L. II. Intercalated ducts and granular striated ducts. By BERNARD TANDLER and DONALD K. MACCALLUM. . . . . | 117  |
| Sensory nerves in the mammalian urinary tract. An evaluation using light and electron microscopy. By J. A. GOSLING and J. S. DIXON . . . . .                                                                                 | 133  |
| The pseudoepiphysis of the first metacarpal of man. By R. WHEELER HAINES. . . . .                                                                                                                                            | 145  |
| Venous drainage of the corpus cavernosum penis in impotent and normal bulls. By R. R. ASHDOWN and H. GILANPOUR . . . . .                                                                                                     | 159  |
| The regeneration of skeletal muscle fibres <i>per continuum</i> . By E. C. B. HALL-CRAGGS. . . . .                                                                                                                           | 171  |
| Skeletal malformations of forelimbs of rat fetuses caused by maternal administration of cyclophosphamide during pregnancy. By SHAMER SINGH and A. K. SANYAL . . . . .                                                        | 179  |

|                                                                                                                                                         | PAGE |
|---------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| The response of the tonsil and associated lymph nodes of gnotobiotic piglets to the presence of bacterial antigen in the oral cavity. By J. C. ANDERSON | 191  |
| BOOK REVIEWS                                                                                                                                            | 199  |
| PROCEEDINGS OF THE ANATOMICAL SOCIETY OF GREAT BRITAIN AND IRELAND, DECEMBER 1973                                                                       | 201  |

## PART 2 – APRIL 1974

|                                                                                                                                                                             |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Effects of cortisone on the fetal and neonatal thymolymphatic organs in rats. By A. FEIN, A. ORNOY and L. NEBEL                                                             | 223 |
| The development of cholinesterase activity in the rat heart. By MICHAEL FINLAY and ROBERT H. ANDERSON.                                                                      | 239 |
| Lymphoid tissue in the nasal mucosa of primates, with particular reference to intraepithelial lymphocytes. By S. K. LOO and K. N. CHIN                                      | 249 |
| Synthesis of both neurohypophysial hormones in both the paraventricular and supraoptic nuclei of the rat. By G. D. BURFORD, R. E. J. DYBALL, R. L. MOSS and B. T. PICKERING | 261 |
| Anatomy of the rectum and anal canal of the monkey ( <i>Macaca mulatta</i> ). By INDAR JIT                                                                                  | 271 |
| The caudate nucleus of the rat: cell types and the demonstration of a commissural system. By PATRICIA MENSAH and SAMUEL DEADWYLER                                           | 281 |
| Development of smooth muscle cells in tissue culture. By GORDON R. CAMPBELL, JULIE H. CHAMLEY and GEOFFREY BURNSTOCK                                                        | 295 |
| Cell renewal of oral mucosal epithelium of the rat. By IAN A. HAMILTON and H. J. J. BLACKWOOD                                                                               | 313 |
| The double motor innervation of the opponens pollicis muscles: an electromyographic study. By DAN HARNESS, ELIEZER SEKELES and JOSHUA CHACO                                 | 329 |
| Morphology of the primate nasopharynx. By K. LEELA, R. KANAGASUN-<br>THERAM and F. Y. KHOO                                                                                  | 333 |
| Scanning electron microscopy of neurulation in the chick. By P. A. PORTCH and A. J. BARSON                                                                                  | 341 |
| A relationship between alkaline phosphatase activity and the phagocytosis and degradation of collagen by the fibroblast. By A. R. TEN CATE and S. SYRBU                     | 351 |
| Organ culture of cortical fragments and Graafian follicles from human ovaries. By T. G. BAKER and P. NEAL                                                                   | 361 |
| Studies of oogenesis and follicular development in the golden hamster. I. A quantitative study of meiotic prophase <i>in vivo</i> . By SUSAN CHALLONER                      | 373 |
| The effect of exercise on the progress of the myopathy in dystrophic hamster muscle fibres. By K. F. HOWELLS and G. GOLDSPIK                                                | 385 |

|                                                                                                                                                                                                  | PAGE |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| Some observations on the innervation of the pinna of the ear of the rat. By J. A. KIERNAN and R. MITCHELL . . . . .                                                                              | 397  |
| The cisterna chyli and thoracic duct of the cat. I. An anatomical study. By F. E. F. LINDSAY . . . . .                                                                                           | 403  |
| The role of cartilage in long bone growth: a reappraisal. By A. M. LUTFI .                                                                                                                       | 413  |
| The effects of fetal thyroidectomy and thyroxine administration on the development of the skin and wool follicles of sheep fetuses. By R. E. CHAPMAN, P. S. HOPKINS and G. D. THORBURN . . . . . | 419  |
| An autoradiographic study of cellular proliferation in the uterus and placenta of the pregnant rat. By D. BULMER and SANDRA PEEL . . . . .                                                       | 433  |
| BOOK REVIEWS . . . . .                                                                                                                                                                           | 443  |

## PART 3 - JULY 1974

|                                                                                                                                                                                                                |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Scanning electron microscopy of the rat renal papilla. By N. CARROLL, G. W. CROCK, C. C. FUNDER, C. R. GREEN, K. N. HAM and J. D. TANGE . . . . .                                                              | 447 |
| Surface area of motor end plates in fast and slow twitch muscles of the rabbit. By P. L. R. DIAS . . . . .                                                                                                     | 453 |
| Schwann cell length in unmyelinated fibres of human sural nerve. By F. CARLSEN, G. G. KNAPPEIS and F. BEHSE . . . . .                                                                                          | 463 |
| A light microscope study of glial necrosis with age in the anterior limb of the anterior commissure of the pre and postnatal mouse. By R. R. STURROCK .                                                        | 469 |
| The effect of age on the weights and lengths of pigs' intestines. By R. A. McCANCE . . . . .                                                                                                                   | 475 |
| A method for the evaluation of the surface area of cerebral ventricles in animals. By I. M. LEVINGER and J. KEDEM . . . . .                                                                                    | 481 |
| Ultrastructure and three-dimensional organization of synaptic glomeruli in rat somatosensory thalamus. By J. ŠPAČEK and A. R. LIEBERMAN . . . . .                                                              | 487 |
| Regeneration of peripheral unmyelinated nerves. Fate of the axonal sprouts which develop after injury. By GARTH M. BRAY and ALBERT J. AGUAYO .                                                                 | 517 |
| Genotypic differences in the ossification of 12 day old mice at 23 °C and 32 °C. By G. GARRARD, G. A. HARRISON and J. S. WEINER . . . . .                                                                      | 531 |
| The behaviour of the dorsal mucosa of the rat tongue in organ culture. By A. E. W. MILES . . . . .                                                                                                             | 541 |
| Freeze-etch study of smooth muscle cells from vas deferens and taenia coli. By HIROSHI WATANABE and TOSHI YUKI YAMAMOTO . . . . .                                                                              | 553 |
| The 'skeletal profile' and dentition of some inbred strains of mice. By G. A. DE S. WICKRAMARATNE . . . . .                                                                                                    | 565 |
| The intrinsic innervation of the pancreas of the grass-snake ( <i>Natrix n. natrix</i> L.), with particular reference to acetylcholinesterase activity in the islets of Langerhans. By T. TRANDABURU . . . . . | 575 |

|                                                                                                                                                                                  | PAGE |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| Oogenesis in human fetal ovaries maintained in organ culture. By T. G. BAKER and P. NEAL . . . . .                                                                               | 591  |
| Area intercondylaris tibiae: Osseous surface structure and its relation to soft tissue structures and applications to radiography. By KLAUS JACOBSEN                             | 605  |
| The developing human fetal pancreas: an ultrastructural and histochemical study with special reference to exocrine cells. By MATTI LAITIO, ROBERT LEV and DONALD ORLIC . . . . . | 619  |
| BOOK REVIEWS . . . . .                                                                                                                                                           | 635  |
| BOOKS RECEIVED . . . . .                                                                                                                                                         | 639  |
| PROCEEDINGS OF THE ANATOMICAL SOCIETY OF GREAT BRITAIN AND IRELAND, APRIL 1974 . . . . .                                                                                         | 641  |
